cmotion Cinefade VariND

The cmotion Cinefade VariND is shipping worldwide. Order your system through us to own a novel form of cinematic expression.

Cinefade mode allows cinematographers to gradually transition between a deep and a shallow depth of field in one shot at constant exposure to accentuate a moment of extreme drama in film or to make a client's product stand out in commercials.

VariND mode enables camera assistants and DITs to remotely adjust ND value when the camera is inaccessible to precisely control exposure, as well as to dynamically adjust the variable ND filter during an interior to exterior Steadicam transition shot without 'riding the iris'.

RotaPola mode is great for automotive productions using a car rig, U-Crane or TechnoDolly to wirelessly adjust the polarisation angle and control reflections on vehicles.

Cable Guide

The *LPS-7LBUS Power cable* is intended to power the Cinefade VariND so it can be used as a standalone variable ND filter or standalone motorised polariser without a lens control system.

An *LBUS to LBUS cable* is required to connect the Cinefade VariND to the cPRO camin or cPRO motor to enable the full functionality with the cPRO lens control system.

cmotion Cinefade VariND

(includes Motorised Polariser, Static Polariser and hard case)

€8,380.00 (excl. tax)

LBUS Power cable +€200 and LBUS angled cable +€210

Visit our website www.cinefade.com and www.cmotion.eu for more information and features.
